Street Banner

Street Banners offer a great way of promotion in urban centres and inner cities. They can be mounted on almost any outdoor power pole or lamppost, even on columns and indoor pillars.

Mounting the system on walls is also possible. Once it has been installed, the brackets of the system can remain on the pole or wall. The changing of the banner is very easy.

Banner

- **Multiflag®**
ca. 110 g/m²
max. sizes (WxH):
50 cm x 300 cm or
70 cm x 250 cm

Mounting options

Street Banner Basic

Street Banner Select

Street Banner Basic

Street Banner Basic offers reliable and effective long-term advertisement at a reasonable price. The system can be used with one or two banner arms to ensure highest visibility of your advertising message. The prints can be removed at any time and replaced by new ones.

- can be used indoors and outdoors up to wind force 5-6 Bft (30-45 km/h; 19-28 mph)
- Street Banner with good price-performance ratio
- durable system parts made of cast aluminium and stainless steel
- the banner arms are mounted on poles, lampposts and columns (Ø max. 30 cm) using steel strips (Length: 100 cm, Width: 12 mm)
- also applicable for wall mounting: attachment of the banner arms on walls using screws and dowels (8x70 mm)

Street Banner Select

Street Banner Select were developed to be used in areas with higher wind force. The high-quality system consists of particularly reinforced cast aluminium brackets including banner arms made of glass-fibre.

- can be used in areas with higher wind strength up to wind force 9-10 Bft (75-100 km/h; 47-62 mph)
- high-grade system, exceptionally stable
- break-proof system parts made of stainless steel, cast aluminium and glass-fibre
- the banner arms are mounted on poles, lampposts and columns (Ø max. 30 cm) using steel strips (Length: 100 cm, Width: 12 mm)
- increased safety through additional locking system with pin
- also applicable for wall mounting: attachment of the banner arms on walls using screws and dowels (8x70 mm)

All sizes are approximate. As we are constantly developing our products we reserve the right of changing technical issues and dimensional deviations.

Please note: To avoid damages of the Street Banners' bracket on plane surfaces (e.g. on walls, steel beams etc.) ensure that the maximum tightening torque of the mounting screw does not exceed 40 Nm (not applicable when using the supplied steel strips). Make sure to prevent the screw joint in metal from self-loosening.
